DECLARATION OF PERFORMANCE

DoP: 0130

for fischer Highbond-Anchor FHB II (Bonded anchor for use in concrete) – **EN**

1. Unique identification code of the product-type: **DoP: 0130**

2. Intended use/es: **Post-installed fastening in cracked or uncracked concrete, see appendix, especially Annexes B 1 to B 9**

3. Manufacturer: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Straße 1, 72178 Waldachtal, Germany**

4. Authorised representative: **--**

5. System/s of AVCP: **1**

6. European Assessment Document: **ETAG 001; 2013-04**

   European Technical Assessment: **ETA-05/0164; 2017-12-14**

   Technical Assessment Body: **DIBt**

   Notified body/ies: **1343 – MPA Darmstadt**

7. Declared performance/s:

Mechanical resistance and stability (BWR 1), Safety in use (BWR 4)

- **Characteristic resistance for tension and shear loads: See appendix, especially Annexes C 1 to C 4**
- **Displacements under shear and tension loads: See appendix, especially Annexes C 5 to C 6**

Safety in case of fire (BWR 2)

- **Reaction to fire: Anchorages satisfy requirements for Class A 1**
- **Resistance to fire: NPD**

8. Appropriate Technical Documentation and/or Specific Technical Documentation: ---

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2017-12-20

- This DoP has been prepared in different languages. In case there is a dispute on the interpretation the english version shall always prevail.
- The Appendix includes voluntary and complementary information in English language exceeding the (language-neutrally specified) legal requirements.

Specific Part

1 Technical description of the product

The fischer Highbond-Anchor FHB II is a torque controlled bonded anchor consisting of a mortar cartridge with mortar fischer FIS HB or fischer mortar capsule FHB II–P(F) and an anchor rod FHB II - A L or FHB II - A S with hexagon nut and washer.

The glass capsule is set into a drilled hole in the concrete. The special formed anchor rod is driven into the glass capsule by machine with simultaneous hammering and turning. For the injection system the anchor rod is placed into a drilled hole filled with injection mortar. The load transfer is realised by mechanical interlock of several cones in the bonding mortar and then via a combination of bonding and friction forces in the anchorage ground (concrete).

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic values under tension and shear load	See Annex C 1 to C 4
Displacements under tension and shear loads	See Annex C 5 and C 6

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	No performance assessed

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013, used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

In-service temperature		-40°C to +80°C	(max. short term temperature +80 °C and max. long term temperature +50 °C)		

Specifications of intended use (part 2)

Base materials:

- Reinforced or unreinforced normal weight concrete Strength classes C20/25 to C50/60 according to EN 206-1:2000

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
  (zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist
  (stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure, to permanently damp internal conditions or in other particular aggressive conditions (high corrosion resistant steel)

  Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static actions are designed in accordance with:
  EOTA ETAG 001 Annex C, 08/2010 or CEN/TS 1992-4:2009

Installation:

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- In case of aborted hole: The hole shall be filled with mortar
- Observe the effective anchorage depth
- Overhead installation is allowed

Annex B 6

Installation instructions part 1; Installation with mortar capsule FHB II-P or FHB II-PF

Drilling the hole (hammer drilling with standard drill bit)

1		Drill the hole with hammer drill. Drill hole diameter $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$ see **Tables B3.1, B4.1** Cleaning of the bore hole is not necessary

Go to step 3

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1		Check a suitable hollow drill (see **Table B1.1**) for correct operation of the dust extraction
2		Use a suitable dust extraction system, e. g.Bosch GAS 35 M AFC or a comparable dust extraction system with equivalent performance data Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Diameter of drill hole d0 and drill hole depth h0 see **Tables B3.1, B4.1**

Go to step 3

Installation Highbond-Anchor rod FHB II – A L and FHB II – A S

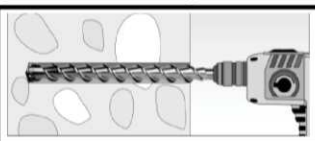
3		Put the mortar capsule FHB II-P or FHB II-PF into the bore hole
4		**Pre-positioned anchor:** Only use Highbond-Anchor rods **FHB II - A L** or **FHB II – A S** with **roof-shaped point.** Drive in the Anchor rod using a hammer drill or impact drill. When reaching the setting depth mark stop the drill immediately.
		**Push through anchor**: Only use Highbond-Anchor rods **FHB II – A S** with **roof-shaped point.** Drive in the anchor rod using a hammer drill or impact drill. When reaching the setting depth mark stop the drill immediately.
5		After inserting the anchor, excess mortar must be emerged around the anchor.
5a		For overhead installations support the anchor rod with wedges. (e.g. fischer centering wedges) 
6		Wait for the specified curing time t_{cure} see **Table B.2**
7		Mounting the fixture T_{inst} see **Tables B3.1, B4.1**
Option		After the minimum curing time is reached, the gap between anchor and fixture (annular clearance) may be filled with mortar via the fischer filling disc FFD. compressive strength ≥ 50 N/mm^2 (e.g. FIS HB). ATTENTION: Using fischer filling disk FFD reduces t_{fix} (usable length of the anchor)

fischer Highbond-Anchor FHB II	**Annex B 7**
Intended use Installation instructions part 1; Installation with mortar capsule	

Installation instructions part 2; Installation with injection mortar FIS HB

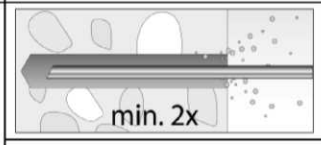
Drilling and cleaning the hole (hammer drilling with standard drill bit)

1



Drill the hole with hammer drill.
Drill hole diameter $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$ see **Tables B3.1, B4.1**

2

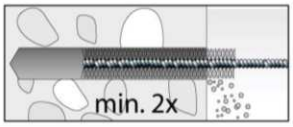


Blow out the drill hole twice.
If necessary, remove standing water out of the bore hole

For drill hole diameter $\mathbf{d_0}$ < 25 mm with hand-blowout or oil-free compressed air

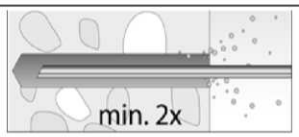
For drill hole diameter $\mathbf{d_0}$ = 25 mm with oil-free compressed air (p ≥ 6 bar)
Use a cleaning nozzle

3



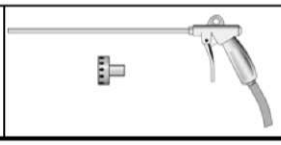
Brush the bore hole twice.
Corresponding brushes see **Table B5.2**

4



Blow out the drill hole twice

For drill hole diameter $\mathbf{d_0}$ < 25 mm with hand-blowout or oil-free compressed air



For drill hole diameter $\mathbf{d_0}$ = 25 mm with oil-free compressed air (p ≥ 6 bar)
Use a cleaning nozzle

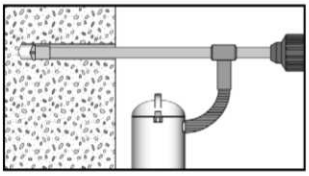
Go to step 5

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1

Check a suitable hollow drill (see **Table B1.1**) for correct operation of the dust extraction

2



Use a suitable dust extraction system, e. g.Bosch GAS 35 M AFC or a comparable dust extraction system with equivalent performance data.
Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power.
Diameter of drill hole $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$ see **Tables B3.1, B4.1**

Go to step 5

fischer Highbond-Anchor FHB II

Intended use
Installation instructions part 2; Installation with injection mortar

Annex B 8

Installation instruction part 3; Installation with injection mortar FIS HB

Preparing the cartridge

5		Remove the sealing cap Screw on the static mixer (the spiral in the static mixer must be clearly visible)
6	 	Place the cartridge into the dispenser
7	 	Extrude approximately 10 cm of material until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

Injection of the mortar

8		Fill approximately 2/3 of the drill hole with mortar. Exact quantity of mortar (travel scale on the cartridge) see instruction sheet. Fill the drill hole with mortar, always begin from the bottom of the hole to avoid bubbles
		**Push-through installation:** By using Highbond-Anchor rods **FHB II - AL** the drill hole in the fixture must be also filled with mortar. By using Highbond-Anchor rods **FHB II - AS** is this not necessary.
		For drill hole depth ≥ 170 mm use an extension tube

Installation Highbond-Anchor rod FHB II – A L and FHB II – A S

9		Only use clean and oil-free anchor rods. Push the anchor rod down to the bottom of the hole, turning it slightly while doing so.
10		After inserting the anchor rod **FHB II - AL**, surplus mortar must be escaped from the fixture. After inserting the anchor rod **FHB II - AS**, surplus mortar must be escaped from the bore hole or must be visible in the fixture.
		For overhead installations support the anchor rod with wedges. (e.g. fischer centering wedges) 
11		Wait for the specified curing time t_{cure} see **Table B6.1**
12		Mounting the fixture T_{inst} see **Tables B3.1, B4.1**
Option		After the minimum curing time is reached, the gap between anchor and fixture (annular clearance) may be filled with mortar via the fischer filling disc FFD. compressive strength ≥ 50 N/mm² (e.g. FIS HB). ATTENTION: Using fischer filling disk FFD reduces t_{fix} (usable length of the anchor)
