For filling mortars in joints, frames, caves

## Technical details

# Hand mortar pumps

**Hand mortar pumps are small but strong helping tools for all mortar works in smaller quantities.**

Ideal tool for filling grouts and mortars into door or window frames. Also caves and hollow spaces can be filled without any electricity. Inside the pump is a sealing package to prevent from back leaking - therefore also overhead work is possible without problem.

Mix the material with water and then suck the material inside the pump just by pulling back the trigger. Now the pump is ready to use. The right model depends on which material you use.

### Technical features at a glance:

- No electricity needed
- Suitable for overhead working
- Various material outlets (slots, hole)
- Patented piston sealing
- Lightweight and handy
- For all mortars or grouts with max 4 mm grain
- For filling caves also with hose adaptor and GEKA
- Sealing set available as service kit
- Simple to use and easy to clean

Filling the gun with mortar

Filling of frame joints

Sealing set as spare part

Model 1 BM13300012	Long version, slot 18 mm, 1,2 kg
Model 2 BM13300016	Angel 30° hole dia 24 mm, 0,9 kg
Model 3 BM13399915	Angel 30°, slot 18 mm, 0,9 kg
Model 4 BM13300010	Short version, slot 10 mm, 0,9 kg
Model 5 BM13300011	Short version, slot 18 mm, 0,9 kg
Model 6 BM13300016-GK	Angle 30° round cpl. with hose DN 13*
Model 7 BM13300016-GK10	Angel 30° round cpl. with hose DN 25*
Sealing set BM13300000	Sealing set complete

\*Check material before use, #6 & #7 are not suitable for bigger grain size.
